Zephyr[®] Valve: A New Treatment Option

Thank you for your interest in the Zephyr Valve treatment for severe emphysema. You may be able to breathe easier, do more, and enjoy a better quality of life.¹

After a formal diagnosis and better understanding of the severity of your illness by your care team, you can discuss a treatment plan. There are many possible treatment options based on the severity of your disease, the impact on your quality of life, and other current health conditions.

Treatment Options

Oxygen Therapy,
Corticosteroids,
Bronchodilator

Pulmonary
Rehabilitation

**Zephyr Endobronchial
Valves**

Lung Volume
Reduction Surgery

Lung
Transplant

Non-surgical

Minimally invasive

Surgical

A new treatment option

The Zephyr Valve is not another medication or surgery that requires cutting or incisions. Instead, it's a minimally invasive procedure that places tiny valves in airways in the lungs to allow the healthier parts of the lungs to expand.

Complications of the Zephyr Endobronchial Valve treatment can include but are not limited to pneumothorax, worsening of COPD symptoms, hemoptysis, pneumonia, dyspnea and, in rare cases, death.

Take the next step

Schedule an appointment with one of the following hospitals – which now offer the Zephyr Valve – to see if the treatment is right for you. We will also notify you as more hospitals in the U.S. become available.

1. Criner G et al AM J Resp Crit Care Med 2018, Published on 22-May-2018 as 10.1164/rccm.201803-05900C

Caution: Federal law restricts this device to sale by or on the order of a physician.

Brief Statement: The Pulmonx Zephyr® Endobronchial Valves are implantable bronchial valves indicated for the bronchoscopic treatment of adult patients with hyperinflation associated with severe emphysema in regions of the lung that have little to no collateral ventilation. The Zephyr Valve is contraindicated for: Patients for whom bronchoscopic procedures are contraindicated; Patients with evidence of active pulmonary infection; Patients with known allergies to Nitinol (nickel-titanium) or its constituent metals (nickel or titanium); Patients with known allergies to silicone; Patients who have not quit smoking; Patients with large bullae encompassing greater than 30% of either lung. Use is restricted to a trained physician. Prior to use, please reference the Zephyr EBV System Instructions for more information on indications, contraindications, warnings, all precautions, and adverse events.
